

Name: _____ Solution _____ Roll No: _____ Section: _____

1. Draw the linklist created by the following code, and show its output

```
nodeType *list, *ptr;  
list = new nodeType;  
list->info = 10;  
ptr = new nodeType;  
ptr->info = 13;  
ptr->link = NULL;  
list->link = ptr;  
ptr = new nodeType;  
ptr->info = 18;  
ptr->link = list->link;  
list->link = ptr;  
cout << list->info << " " << ptr->info << " ";  
ptr = ptr->link;  
cout << ptr->info << endl;
```

2. Write the destructor function for the link list class

```
~LinkedList() {  
    Node* temp;  
    while(head != NULL){  
        temp = head;  
        head = head->link;  
        delete temp;  
    }  
}
```
